Texas Manufacturer and Distributor of Embedded Computers Selects Metasystems® ICIM® ERP Business System Solution

Cleveland, OH – Metasystems, Inc., an enterprise software provider for “to-order” discrete manufacturers, and the authors of their integrated configuration based ERP software known as ICIM, announced the addition of a new business partnership with an embedded Computer manufacturer.

A Texas manufacturer and distributor of embedded computers, for use in industrial applications, realized they needed to get a handle on their business processes and current operations. Offering highly engineered products, their need for creating and tracking Bills of Material (BOM's) was extremely important; additionally they were not using any type of Material Requirements Planning (MRP) for their inventory control and scheduling. In order to grow the Company they knew it was important to find integrated ERP software to help them. ICIM allows them to access real-time information that will help them tighten lead times, control costs, better control inventory, create and track BOM's, track work order status and work in progress (WIP), expedite orders to production, produce workflow notification between departments, and get real-time financial information for up to the minute analysis. Outside of the robust functionality of ICIM there was another strong deciding factor, there was an instant and strong connection between the two teams. The company saw that ICIM would help them immediately become more productive but of equal importance was their realization that the ICIM software would grow with them as their business grew. The demonstrated ability to grow as their business grew was the deciding factor in choosing Metasystems as their ERP business solution provider.

Metasystems, Inc., now proudly celebrating over 30 years in business, has been providing their “ICIM” Enterprise Resource Planning (ERP) software to small and mid-sized manufacturing companies across the U.S., Canada and U.K. in a variety of industries. ICIM is extremely flexible and modifiable to meet manufacturer's unique business requirements; integrating Sales, CRM, Engineering, Manufacturing and full Financials. As the authors, developers, programmers, implementers and supporters for ICIM, the Metasystems team can adapt their software to fit your unique business requirements to give you the business solution you need and deserve. The flexibility of ICIM allows us to service and support a number of different manufacturing industries where dimensionality product configuration is a key requirement.
